

Hydraulic Power Units - Ordering Instructions

- Step 1** – Determine the size of the Hydraulic Power Unit required. Check the aircraft maintenance manual, or refer to Tronair's Aircraft Tool and Equipment list at tronair.com
- Step 2** – Select the correct fluid type that matches your aircraft
- Step 3** – Determine if the unit requires a CE mark and/or an Electric Soft Start (call for soft start availability)
- Step 4** – Choose a paint color from the available colors
- Step 5** – Select quick disconnect couplings to attach the hoses to the aircraft bulkhead fittings. These couplings will become part of the model number sequence, they are attached to hose ends upon receipt
- Step 6** – Determine the input voltage the Hydraulic Power Unit will be operating at. **When ordering, the most common error is selecting incorrect input voltages** (To check input voltage, measure from L1 to L2, L1 to L3, and L2 to L3. The highest voltage obtained from these readings is the correct input voltage)
- Step 7** – Select additional features to customize your unit. We offer a broad range of options to enhance your Hydraulic Power Unit to your particular needs or budget. Options listed in the chart must be in alphabetical order. Refer to the option matrix (below) for standard features per model number
